

MAUSER Cardoor™

MAUSER's new family of cans and jerricans keep your filling good in good condition, especially on the market of automotive products. The easily remembered design reminds of a car door, thus making a connection between contents and application. Especially with substitutional filling goods like oil, anti freeze or brake fluid, the shape of a packaging plays an important role for a purchase decision. The large symmetric label field offers perfect

advantages for a modern design. The new Cardoor™ is available with various modern closure systems and has a transparent filling scale in the standard version. It is light, fits pallets and shelves and can be emptied without any residues. This sturdy and remarkable packaging is extrusion blow molded out of one piece from high molecular polyethylene.

Your benefit

- Remarkable design communicates with the application of the filling good
- Suitable for many filling goods
- Optimum handling
- Large sized, symmetric labeling fields
- Various closure systems
- Transparent filling scale
